## BVD TESTING IS NOT REQUIRED TO BRING CATTLE TO THE FEEDLOT

Some sales require BVD testing, please check your sale destination rules and test accordingly. If you need us to BVD test your bulls please let us know.

Bulls will be sharing a pen. Please clean up the ringworm before they come to the feedlot. It spreads like wildfire in a feedlot. Call for treatment suggestions.

## Vaccination History

(Upon arrival the cattle are given Safeguard, magnet and wart vaccine. So there is no chance of vaccination duplication please write down the vaccination history and be complete and specific, and include brand names and calfhood vaccinations.)
